Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 1625

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6 ,the chemical term " piperiditne" is recited. This is vague and indefinite because the specification does not elaborate what is meant by the term. An appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

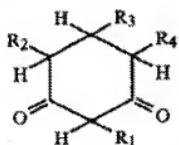

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 , 4-5, and 7-12 are rejected under 35 U.S.C. 102(b) as being anticipated clearly by Muller (US 4,212,823).

Muller discloses the followings(see abstract):

3-Aminophenols are prepared by dehydrogenation at elevated temperature of 3-aminocyclohexenones. The compounds obtained are valuable intermediates for drugs, dyestuffs and herbicides.

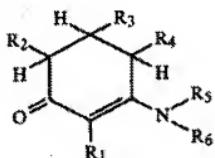

When one mole of a cyclohexanediones

is reacted with one mole of an amine

3-aminocyclohexenones of the formula

are obtained.

In the above formulae the radicals R₁ to R₆, which may be identical or different, have the following meaning: hydrogen; straight chain, branched or cyclic alkyl groups generally having up to 12 carbon atoms and optionally carrying substituents; aryl groups having from 6 to 14 carbon atoms and optionally being substituted. The radicals R₅ and R₆ may also form together an alkylene group having from 4 to 6 carbon atoms, which may be interrupted by an oxygen or a substituted nitrogen atom.

(see col. 2 ,lines 3-37)

Art Unit: 1625

Depending on the type of the aminocyclohexenones used and on the reaction conditions applied, the dehydrogenation is carried out continuously or discontinuously at a temperature in the range of from 130° to 450°

(see col. 4, lines 43-47). This is identical with the claims.
